Phone: (877) 265-2139
Fax: (407) 786-8131

PrimeLine Products Inc., in Altamonte Springs, Florida, is a full-service provider of products for the Trenchless Rehabilitation Industry. Product Line includes equipment to repair lines from 4-inch diameter to 36-inch diameter, plugs, deflection gauges, air testing equipment, and accessories. Manhole/Wetwell Rehabilitation products are also available to repair underground structures. PrimeLine uses an engineered composite made of felt tube and silicate-based, or epoxy ambient cure resin to invert a liner into a lateral, from the property line or cleanout to the connection with the sewer line, forming a “pipe within a pipe” to efficiently repair broken pipe, leaking joints and other infiltrating defects in the lateral pipe.
