Fax: (727) 327-4118

Infrastructure Repair Systems, Inc., located in St. Petersburg, Florida, is the sole manufacturer of its patented Trenchless Infrastructure Point Repair System for mainlines and laterals and Infrastructure Concrete and Manhole Rehabilitation Products. Infrastructure Mainline Point Repair System is a cost-effective, permanent solution for aging sewer systems. A leaking joint or even a missing piece of pipe is not a reason to line the whole pipe. Eliminate the problems and save \$ 1,000 with each point repair. Trusted by municipalities and contractors across America, Infrastructure Repair is the permanent, trenchless, sectional pipe repair solution. The infrastructure of the Lateral Repair System utilizes much of the same technology as our Mainline Point Repair System. The innovative push-pull system, sold in a complete kit, can now navigate a 90-degree elbow with ease in a 4" or larger pipe. This is the cost-effective, reliable, quick, and easy solution contractors and plumbers have been waiting for. Infrastructure Repair System's Concrete and Manhole Rehab System comes in two trowel-on applications. Chim-Coat, the scientifically formulated flexible epoxy, expands and contracts with changing temperatures. Infragard Top Coat is the epoxy topcoat for any concrete or brick surface that can be applied onto damp or dry surfaces. Both products seal and stop infiltration or exfiltration. They are easy to use, and no heavy equipment is needed to purchase or set up!
