Fax: (732) 254-0101

ICON Equipment manufactures and distributes directional drilling equipment, trench boxes, tunnel boring machines, and directional boring machines for many trenchless technology applications. The company also provides a comprehensive line of services that includes consulting, design, engineering, manufacturing, repair, competency training, excavation safety, and field services. ICON can deliver the expertise, equipment, and personnel to make your next project happen safely, on time, and budget. ICON also offers lightweight aluminum hydraulic shoring as one of the safest, most versatile means and methods of shoring, even the most difficult excavation. Typically, one worker can safely and effectively shore a trench as quickly as it is excavated, allowing the excavator to operate at total digging capacity. Active preloading of trench walls maintains the vertical trench sides, preventing soil from moving or collapsing inward. Since 1982, ICON has expanded its company and knowledge to become a full-service industry leader in the trench shoring and underground guided auger dull markets. It provides its customers with equipment and product sales, rental, and manufacturing.
