Fax: (904) 419-4892

CCI Spectrum, in Jacksonville, Florida, is the patent holder for the SPECTRASHIELD Liner System and licenses the use of this technology through a network of licensed applicators. Several U.S. Patents have been issued for SpectraShield based on the systematic layering of polymer resins which impart structural strength due to its "Stress Skin Panel" effect. In addition, the multi-layers eliminate groundwater intrusion, restore a structure's profile and provide a light reflecting, impervious barrier to environmental penetration. The installation is done by way of trenchless application (CIP) therefore causing minimal disruption to the surrounding environment. A seven foot deep manhole can be lined in less than one hour. The SPECTRASHIELD Liner System has been successfully installed in over 37,000 structures around the United States, Canada and Europe.
