Internal Pipeline Services (IPS), headquartered in Venus, Texas, is the international leader of internal pipeline cleaning and coating, offering a wide range of cost-effective solutions. The company specializes in applying epoxy coating inside pipelines to combat various corrosion issues. The IPS process is unique in that up to 20-mile sections of new and old pipelines are cleaned and epoxy coated without digging up or segmenting. Pipeline pigs are used to mechanically and chemically clean the full length of the pipeline. To complete the process, the pipeline pigs apply a unique corrosion-resistant epoxy coating. IPS pipe cleaning and coating is a viable and cost-effective solution for maintaining the integrity of your pipelines. The in-situ process is one of the few existing technologies that can deliver a continuous epoxy barrier to long pipe sections. When corrosion, product purity, or flow problems occur, IPS can provide the solutions.
