Phone: (318) 257-4072

The Trenchless Technology Center (TTC) is an industry/university/government cooperative research center in the Louisiana Tech University's College of Engineering and Science. The TTC was established September 1989 to assist in the development of trenchless technologies through basic research, applied research, and technology development activities coupled with educational, outreach, and technology transfer programs. TTC offers a highly collaborative environment that allows industry, university and government affiliates to come together and develop creative solutions with real potential. The TTC has proven to be a highly successful collaborative effort, thanks to Louisiana Tech University's College of Engineering and Science, the Industry Advisory Board (IAB), and the many organizations that the Trenchless Technology Center works with.
