11618 130 St
Surrey, British Columbia V3R 2Y3
Canada

Phone: (604) 580-0446

PW Trenchless Construction, Inc. (PWT) is a Canadian contracting firm offering trenchless underground utility construction services headquartered in Surrey, British Columbia. Established in January 2000, PW Trenchless has been at the forefront of the Trenchless Underground Utilities Construction sector in British Columbia. Specializing in Pipe Bursting, Sliplining, and Culvert Rehabilitation, but partners with other trenchless specialty companies to offer various services. The Trenchless Carbon Calculator allows utility owners to offset their pipeline construction activities and gain carbon credits, which can be used to neutralize carbon emissions. PWT, working in conjunction with others, has led the way in developing this system to allow cities to gain carbon offsets for their trenchless programs. The City of New Westminster, British Columbia, was the first to avail of this technology in June of 2016 when they received an offset of over 400 metric tonnes for their trenchless pipe replacement programs. More information about the advantages offered through the use of trenchless technology from PW Trenchless is available on their website.
